## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1-4 are allowed.

### **Reasons for Allowance**

2. Takuya et al. (JP 11-282431) teach In Plane switching mode LCD system, wherein, counter electrodes 17 of odd number row pixels and counter electrodes 17 of even number row pixels are supplied with a common voltage of an inverted polarity by a controller 24 and common circuits 22 and 23 such that the controller 24 supplies a video signal voltage of an alternately inverted polarity to each signal line of the odd number pixels and the signal line of the even number pixels and drives them by inverting the polarity for each line scanning period (see the abstract).

Regarding claims 1 and 3, the prior art does not teach an LCD device in plane Switching mode including a pixel electrode connected to a source lines through a switching element, to which a signal voltage required for image display is supplied by the source line through the switching element, comprising: a step of setting an average value of the signal voltage in such a way that an average value of a positive polarity voltage and a negative polarity voltage of the pixel electrode varies with a grayscale to be displayed, and a step of inputting the average value of the signal voltage to the pixel electrode.

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Abbas I. Abdulsalam whose telephone number is 571-272-7685. The examiner can normally be reached on Monday through Friday from 9:00 A.M. to 5:30 P.M.
